Active Top Secret Security Clearance | San Diego, CA

SUMMARY

Computer Science student at the University of San Diego and former U.S. Air Force command and control specialist experienced building and improving systems in high-reliability environments where speed and accountability matter. Skilled in software development, automation, and data workflows that streamline operations and improve decision-making. Delivered solutions that reduced approval timelines from days to hours, saved thousands of labor hours annually, expanded emergency notification coverage to over 90% of personnel, and supported initiatives conserving more than \$100K in operational costs. Brings a blend of engineering skills, systems thinking, and real-world operational problem solving.

WORK EXPERIENCE

U.S. Air Force - Reserve

Aug 2024 – Present

Senior Nuclear Command and Control Operations Specialist | March ARB, CA

March Air Reserve Base supports global air mobility operations for the U.S. Air Force Reserve, coordinating airlift, refueling, and mission support worldwide. As a senior nuclear command and control specialist, manage operational systems and improves workflows that help mission teams move critical information faster and maintain reliable command support in classified environments.

- Designed and deployed a full-stack fitness tracking web application (Supabase, PostgreSQL) replacing spreadsheet-based workout logging with structured data tracking and automated progress analytics.
- Built responsive data entry interfaces, authentication workflows, and analytics dashboards that improved participation visibility and standardized unit readiness tracking.

U.S. Air Force - Active-Duty

Sep 2018 – Aug 2024

Senior Command and Control Operations Specialist | RAF Mildenhall, United Kingdom

RAF Mildenhall hosts the 100th Air Refueling Wing supporting U.S. and NATO air operations across Europe and Africa. Coordinated multinational operations while identifying operational bottlenecks and building automation and workflow solutions that improved efficiency and decision support.

- Led NATO refueling optimization initiative redirecting surplus fuel to allied aircraft, conserving thousands of pounds of fuel and \$100K+ annually.
- Designed and implemented an automated approval workflow using PowerApps / SharePoint automation system integrated with Outlook, reducing approval timelines from days to hours.
- Eliminated manual coordination processes, saving thousands of labor hours annually and improving operational efficiency.

Subject Matter Expert, Command and Control Operations | Ramstein AB, Germany

Ramstein Air Base serves as the primary hub for the U.S. Air Forces in Europe, supporting large-scale NATO and joint military operations. Selected as a junior NCO to perform duties normally assigned to a Senior NCO, supported complex joint environments by connecting systems, improving coordination workflows, and helping leadership access clear decision-support information.

- Led stand-up of a new command center for U.S. Air Force Africa enabling coordination across multinational command partners.
- Standardized command and control workflows and coordination processes, improving information flow between units and leadership.
- Coordinated the stand-down of two Air Force command centers in Africa, overseeing system transitions and equipment redeployment while maintaining continuity of command and control operations.

Joint Operations Center Controller | USAG Stuttgart, Germany

U.S. Army Garrison Stuttgart hosts U.S. Africa Command and multiple joint military headquarters coordinating operations across the African theater. As a Joint Operations Center controller, managed real-time information flow and operational reporting to maintain situational awareness and support timely decision-making across multinational partners.

- Monitored joint operational activity supporting U.S. Special Operations Command Africa missions across multinational and interagency partners.
- Coordinated real-time mission updates across multiple organizations to maintain shared operational awareness in a high-tempo environment.
- Integrated operational data into centralized reporting workflows, improving mission tracking and leadership decision support.

Nuclear Command and Control Operations Specialist | Incirlik AB, Turkey

Incirlik Air Base supports NATO operations and strategic deterrence missions in the Middle East and Eastern Mediterranean. As a nuclear command and control specialist, maintained secure communications and mission-tracking systems while solving reliability and coordination issues affecting multinational flight operations.

- Managed secure multi-domain communication infrastructure and mission-tracking systems supporting real-time coordination across multinational flight operations.
- Maintained operational reliability of classified command and control systems supporting strategic deterrence missions.
- Strengthened coordination and situational awareness for command leadership during high-tempo mission execution.

Command and Control Operations Specialist | Kadena AB, Japan

Kadena Air Base is the largest U.S. Air Force installation in the Indo-Pacific, supporting regional security operations and airpower projection. As a command and control specialist, managed mission monitoring and the base-wide emergency notification system, using system administration, data cleanup, and workflow redesign to improve the speed and effectiveness of critical alerts.

- Managed and rebuilt the base-wide Emergency Mass Notification System maintaining personnel notification profiles and distribution infrastructure for emergency communications.
- Conducted a full database audit and profile rebuild that increased emergency notification reach from ~50% to over 90% of base personnel.
- Redesigned alert templates and notification workflows, improving clarity and usability for command center controllers enabling faster emergency notifications and improved base-wide situational awareness.

EDUCATION

University of San Diego — B.S., Computer Science (Expected May 2027)

University of Maryland Global Campus — A.A., General Education

Community College of the Air Force — A.A.S., Emergency Management

SKILLS

Languages: C, Java, Python, JavaScript, SQL

Systems and Tools: Linux/Unix, TCP/IP, Socket Programming, Git, GitHub, VS Code, IntelliJ, Vim

Platforms and Technologies: React, Supabase, PostgreSQL, SharePoint, PowerApps, Power Automate

Concepts: Data Structures, Algorithm Analysis, Memory Layout, Bit Manipulation, Testing/Debugging

Leadership: Team Leadership, Operational Coordination, Training & Mentorship, Process Improvement
